Address/es of the manufacturing site/s:

Name / Description:	RenewSys India Pvt Ltd
Street:	Sy. No. 114/P, Srinagar(V), Fabcity, Maheswaram(M), Ranga Reddy, District
Postcode / City:	Hyderabad – 501359
Country:	India
Type of production:	Solar Photovoltaic Modules
Inspection report no:	NA

Summary of testing:

According to the inquiry of the customer, for testing as per IEC 61853-1, *Photovoltaic (PV) module performance testing and energy rating – Part 1:Irradiance and temperature performance measurements and power rating* on PV module type **DESERV-3S6-350**, the results are incorporated in this report no: **ULR: TC568819400000317F**. The above listed module type have passed all tests of the IEC 61215:2005 standard before testing as per IEC 61853-1.

Pass criteria:

1. The values of STC power measured after preconditioning fall within the power range specified by the manufacturer of this product. (results enclosed)
2. After generating the matrix of parameters, the modules are remeasured at STC to verify that the performance is stable. (results enclosed)

All presented results are only valid for the exact tested module type and design (cell type, encapsulation material, glass type)

Summary of test locations:

All tests were performed at TUV Rheinland (India) Pvt Ltd, Bangalore.

Summary of deviations from the standard:

- NA

General product information:

PV module type reference.....	DESERV-3S6-350
Nominal maximum power (P_{max})	350 Wp (-0 +4.99Wp)
Nominal open circuit voltage at (V_{oc})	47.92 V
Nominal short circuit current at (I_{sc})	9.55 A
Nominal maximum power voltage (V_{max})	39.05 V
Nominal maximum power current (I_{max}).....	8.97 A
<u>Product Safety Ratings</u>	-
Maximum system voltage.....	1000 V

Test procedure:

- Random sampling from production
 Prototype submitted by client

Test performed with a solar simulator.

In order to minimize the errors related to translations/interpolations, we used the irradiance-specific temperature coefficients as per IEC 60891:2009, and the temperature and irradiance conditions during the tests were maintained very close (within ± 1 °C and 10 W/m²) to the reporting conditions of 15, 25, NOCT, 50 and 75 °C and 100, 200, 400, 500, 600, 800, 1000, and 1100 W/m².

The linearity of the module and test setup meets the requirements as per IEC 60904-10

Description of similarity (differences) between the applied model and the previously tested model: NA

Annex 1: Equipment used

Equipment	Equipment ID	Cal Due date
Pasan Sun Simulator-3b	50-2010-0111	04-08-2019
Reference Module	50-2018-0297	15-08-2019

Annex 2: Statement of the estimated uncertainty of the test verdicts and spectrum at test plane

- Electrical performance rating is outside the scope of IEC 61215:2005 qualification testing. The verdicts of performance rating are only related to the test samples that were subjected to the tests. They cannot be generalised to the modules from the series production.
- Pmax measurement:2.45% with a coverage factor k=2
- Current measurement:2.27% with a coverage factor k=2
- Voltage measurement:1.39% with a coverage factor k=2
- Relative measurements were performed with a flash type solar simulator.

The accuracy of measurement reproduction with the solar simulator is less than $\pm 1\%$.
